

# Doulos SIL Font Features

Doulos SIL is an OpenType-enabled font that supports the Latin and Cyrillic scripts. It includes a number of optional features that may be useful or required for particular uses or languages. These OpenType features are primarily specified using four-letter tags (e.g. 'cv17'), although some applications may provide a direct way to control certain common features such as small caps. This document lists all the available features.

This page uses web fonts (WOFF2) to demonstrate font features and should display correctly in all modern browsers. For a more concise example of how to use Doulos SIL as a web font see [Doulos SIL Webfont Example](#). See [Using SIL Fonts on Web Pages: OpenType and Graphite feature support](#) for more information.

*If this document is not displaying correctly a PDF version is also provided.*
